Rishav Sanjan

Full-Stack Developer | Mobile App Developer

SUMMARY

Full-Stack Developer specializing in modern JavaScript/TypeScript ecosystems. Highly proficient in React.js, Next.js, React Native, and Tailwind CSS for building fast, dynamic UIs, and experienced with Prisma ORM, Express.js, and Hono for designing scalable APIs and backend architectures. Focused on performance, clean architecture, and exceptional user experience.

SKILLS

Languages & Frameworks :

- JavaScript (ES6+)
- Typescript
- Next.js
- React.js
- React Native
- NodeJS
- Express.js
- Hono
- Tailwind
- HTML
- CSS
- C++

Databases :

- MongoDB
- PostgresSQL
- MySQL

Tools and Platforms :

- Prisma
- Git & Github
- Postman
- Cloudinary

EDUCATION

Master of Computer Applications (MCA)
National Institute of Technology, Bhopal
2027

Bachelor of Computer Applications (BCA)
Jammu University, Kathua

PROJECTS

GamersConnect — Full-Stack Game Discovery & Social Platform

A full-stack web application for discovering games and connecting with other players.

- Integrated IGDB API for trending games, platform-based discovery, trailers, screenshots, DLCs, similar games, and franchise data.
- Implemented playlists, owned-game statuses (Completed / Playing / Abandoned / Not Completed), and custom user collections.
- Designed rich user profiles with genre distribution, platform stats, game activity, and current progress.
- Built a community system featuring posts, screenshots, comments, likes, and filters (Latest/Popular/Trending).
- Added a Twitter-like hashtag system with 24-hour trending tags and hashtag-specific feeds.
- Implemented social features including follows, user profiles, personalized feeds, and visitable player pages.
- Developed joinable groups with dedicated group posts for community discussions.
- Built end-to-end using React/Next.js, TypeScript, Tailwind CSS, Prisma ORM, and Node.js.

Cinely - Movie & TV Show Discovery Mobile App

A mobile application built with React Native for Browse and discovering movies and TV shows.

- Developed a seamless user interface using React Native and TypeScript for cross-platform performance.
- Integrated the TMDB API to fetch and display comprehensive data on movies, TV shows, and actors.
- Implemented state management with Redux Toolkit for features like user watchlists and favorites.
- Applied modular architecture, reusable components, and custom hooks for cleaner, maintainable codebase.
- Designed modern UI with Tailwind CSS (NativeWind) and enhanced visuals using LinearGradient and BlurView.
- Used Cloudinary for image hosting and Prisma + PostgreSQL on the backend via Hono (Cloudflare Workers).

Fit Eats - Full-Stack Food Delivery Web App

A full-stack web application for discovering restaurants around you and order food from there.

- Developed a complete web-based food delivery ecosystem with dedicated user, restaurant, and driver portals.
- Designed a restaurant onboarding dashboard enabling restaurants to register, add dishes, manage menus, and input nutritional composition.
- Developed a driver assignment mechanism using socket.io that broadcasts new orders to multiple drivers, allowing one driver to accept while auto-removing the request from others.
- Integrated real-time delivery tracking, enabling users to monitor driver location and order progress through live geolocation updates.
- Ensured smooth communication between users, restaurants, and drivers using an event-driven backend with real-time updates.

Community-Driven Urban Problem Reporting and Resolution Platform (Mobile + Web App)

A mobile app built for the citizens to report issues and a web app for the administration to visualize the issues that the citizens report.

- Developed a citizen-centric civic issue reporting system with Aadhaar-verified authentication to ensure genuine and trustworthy submissions.
- Enabled geo-tagged reporting with photos, videos, and descriptions, allowing citizens to accurately capture on-ground issues.
- Built a public dashboard where users can view nearby issues, upvote/downvote reports, and avoid duplicate submissions.
- Implemented real-time issue tracking (Pending -> In Progress -> Resolved) with direct administration responses for transparency.
- Added gamification elements such as badges and points to encourage active public participation and community engagement.
- Developed a multilingual chatbot (English & Hindi) to assist users with reporting, tracking complaints, and accessing FAQs.
- Designed an authority dashboard with a live map view to visualize issues, severity levels, and departmental performance.
- Ensured future scalability with support for smart city integration, multilingual expansion, and advanced analytics.

Community Connect – Social Help & Resource Sharing Web App

A full-stack web application that connects users to request and offer help, including food, shelter, and medical resources.

- Built using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Engineered key features including user authentication, creating and replying to threads, and viewing user profiles.
- Designed a responsive and interactive frontend with React.js to ensure a smooth user experience across devices.
- Enabled real-time messaging between users using Socket.IO to support one-to-one private communication.
- Built RESTful backend APIs with Node.js and Express to handle user authentication, post creation, and connection requests.

Fix My Campus – Campus Issue Reporting Web App

A full-stack web application built to help students and staff report, track, and resolve issues across campus facilities efficiently.

- Enabled issue reporting with support for descriptive posts and image attachments.
- Implemented filtering of issues by category for easier navigation and prioritization.
- Allowed users to comment on posts and reply to specific comments with threaded discussions.
- Designed a mobile-friendly, responsive UI to ensure accessibility across all devices.
- Added functionality to upvote or downvote posts based on relevance or urgency.
- Integrated secure login system using MANIT college email IDs to restrict access to the campus community.
- Developed an admin dashboard to view, moderate, and manage reported issues and user activity.
